INTRODUCTION

The three Guianas--Guyana, Surinam, and French Guiana--are closely associated geographically and are frequently considered a single entity for zoogeographic purposes. For this reason we have included the three in one volume. The lists of localities are kept separate, but with a single introduction and bibliography. At present Guyana is a republic within the Commonwealth of Nations, Surinam an independent country, and French Guiana an overseas department of France, an integral part of the French Republic.

The Guianas, particularly "Surinam" and "Cayenne," are the nominal type localities of a great many species of birds described in the late 18th and 19th centuries, and one would expect that the avifaunas of these countries were well known at an early date. However, these early-described species were coastal forms brought back to Europe as curiosities by early travelers, and, except for Guyana, true scientific exploration lagged well behind that of most other South American countries.

In Guyana, the Schomburgks explored the whole country in 1831-1835, and later in that century and in the beginning of this one, Whitely and McConnell amassed large collections of birds for the British Museum. These collections were the main basis of Chubb's two volume, The Birds of British Guiana (1916, 1921a). More recently Snyder (1966) brought together the records of the previous 50 years to publish an up-to-date list as a field guide, The Birds of Guyana.

In Surinam collecting was confined to the coastal areas even into the 20th century, and as late as 1955, when Haverschmidt published his List of the Birds of Surinam, he listed only a single collecting locality south of 4° 30' N Lat. in the whole southern half of the country. This situation was remedied through Haverschmidt's own collecting as well as that of others, so that Haverschmidt's Birds of Surinam (1968) can be considered representative of the whole country. In French Guiana, collecting has been at best sporadic, and there has yet to be published a list of the birds of that country.

As is usual in this series, the Official Standard Names Gazetteers of the United States Board on Geographic Names (USBGN) are accepted as authoritative sources for the spelling of place names for the respective countries. There has been no change in the political status of Guyana or French Guiana since the publication dates of their respective gazetteers (1976, 1974), and there is no reason to expect any name changes. However, Surinam was a territory within the Kingdom of the Netherlands when its gazetteer was published in 1974, and only achieved its independence the following year. By analogy with other newly independent nations, some name changes might be expected. However, we are unaware of any up to the present time, 1985. The official gazetteers consider the boundary rivers between Guyana and Surinam and between Surinam and French Guiana as international waters, and use the conventional spellings, Courantyne and Maroni, for these waters. This is slightly illogical in the
case of Courantyne, because the international boundary is at the highwater mark on the Guyana side, and even landing docks on the Guyana bank are properly in Surinam.

The 1977 map of Surinam, published by the Centraal Bureau Luchtartering, Surinam, shows the boundary between Guyana and Surinam to follow the Boven Corentijn rivier, the stream that is known as the New River on our map. The upper Courantyne of our map, above the mouth of the New River, is called the Coeroeni rivier. The triangle of land between these two rivers and bounded by the Brazil border to the south, has been in dispute for over a century. The original boundary in 1831 was accepted as the west bank of the Courantyne River, and Schomburgk's explorations in 1843 seemed to show that the main branch of the Courantyne was the eastern one, the upper Courantyne with its headwater the Kutari of Guyana maps. Later explorations in 1871 showed that the flow of water in the New River was almost twice that of the Courantyne, and the Dutch claimed that the New River should be considered the upper Courantyne [= Boven Corentijn] and the international boundary. The dispute has never been formally resolved, and at the moment is dormant, but not forgotten. We follow the U. S. Board on Geographic Names in accepting the Guyana usage for this gazetteer.

Precise altitudes, particularly in the northern third of the Guianas, are difficult to come by, but by the same token are of little importance. There are few hills anywhere along the coast, and the hundred meter contour is anywhere from 50 to 200 or 300 km inland. The river valleys are mostly below 100 m until one ascends to 3° or 4° N Lat., and along the Fleuve Oyapock the 100 m contour is reached at about 2° Lat. (MHA). In this gazetteer, the term "coastal plain" includes the lowlands between the Atlantic coast and the 100 m contour, and all altitudes can be assumed to be less than 100 m. The term "coastal" refers to localities along the coast, which are essentially at sea level.

The Guianas all lie north of the equator, so that all latitudes are north. As in the rest of South America, all longitudes are west.

The localities listed herein include all those that we have been able to glean from the literature, plus those on specimens in the Field Museum of Natural History, the Museum of Comparative Zoology, and the Carnegie Museum of Natural History. The Bibliography includes all papers we could locate that are primarily concerned with birds from the Guianas.

We are very grateful for the help of our friends and colleagues in preparing this volume. Raymond A. Paynter, Jr. added from his own card files those localities that we had overlooked, and also those from specimens in the Museum of Comparative Zoology. Kenneth C. Parkes provided us with the localities from specimens in the Carnegie Museum of Natural History, including those from the superb Klages collection. We are especially grateful to G. F. Mees at the Rijksmuseum van Natuurlijke Historie who not only read the first draft of the Surinam list, but sent us his original field catalogues so that we could accurately record his localities from several extensive collecting trips. And finally, we are grateful to and thankful for Alison Pirie, who has again taken chaotic cards and manuscripts and made order of them.

MARONI (Berlepsch, 1908:263); see Maroni River.

MARONI RIVER 0545/5358 (USBGN) Rises from confluence of Lawa, Abounamy and Tapanahoni rivers, flows N to Atlantic Ocean, forming Surinam/French Guiana border (IGN, as "Fleuve Maroni"). The Maroni River (USBGN uses this conventional spelling) forms the boundary between French Guiana and Surinam, but in its upper reaches it carries a confusing variety of names. Above its junction with Tapanahoni rivier (Surinam) and Rivière Abounamy (French Guiana) [0422/5426 (USBGN)] it is known as the Lawa (French Guiana) and Lawa rivier (Surinam), with an earlier spelling, Aoua, being noted in the USBGN. MHA uses Aoua for French Guiana and Lawa for Surinam, although our most recent map, IGN, 1963, uses Rivière Lawa for French Guiana. The upper reaches of the river are known as Rivière Litani or Litani rivier (USBGN), although MHA uses Litany for Surinam and Itany for French Guiana. Recent French maps (IGN, 1963) use Rivière Itany. The change of name from Itany to Lawa occurs at the mouth of Rivière Marouini.
[0318/5404] according to USBGN, but at the mouth of Crique Inini [0339/5400 (USBGN)] according to IGN. Fortunately these names for the upper Maroni have rarely occurred in the bird literature. Geay, date? (Berlepsch, 1908:263, as "Maroni"); Delacour, date? (Delacour, 1922:201); Chauvancy, near St. Laurent and near Grand Saut de l'Iltany, Aug., Sept. 1961 (Berlioz, 1962a:131, 132).

PAROESAVANNA (Haverschmidt, 1968a:27, 421); see Sipaliwini Savanne.

PAROESAVANNE ca. 0208/5600 (CBL)
The "Paroesananne," according to CBL, is in the watershed of the upper West Paru rivier, which is entirely in Brazil. The savannas in the watershed of the upper Sipaliwini rivier, called Sipaliwini Savanne by CBL, are wholly in Surinam and are separated from Paroesananne by the international boundary. However, it is obvious that local usage does not always follow CBL and that "Paroesananne" is sometimes used for the whole savanna area (Haverschmidt, 1968a:27, 421). USBGN evidently agrees with the CBL usage, since there is no entry for "Paroesananne" in the Surinam Gazetteer.
PARU SAVANNAH (Humphrey & Freund, 1962:4); see Sipaliwini Savanne.
